

User Management Module

CountIt — User Management: UI Flow & Behavior

Purpose of this document: Show, screen by screen, how User Management works in CountIt — what a person clicks, what happens next, and who is allowed to see what. Meant to be read alongside the live app and used to confirm with the client that the role logic matches what the business needs.

Source verified against: CountIt Backend Specification (User Management section) and the current frontend audit.

1. What the Spec Requires

- User roles must be **dynamic** (not hardcoded), with four default roles:
 - Organisational Admin
 - Internal Finance
 - Store Manager
 - Sales Team
- Hard rule:** Sales Team and Store Manager users must never be able to see a product's purchase/cost price, anywhere in the app.
- Org Admin must be able to activate/deactivate staff in bulk** — not just one at a time.

2. Screens That Exist Today

Screen	Route	What it's for
Staff List	/staff	See all users, their role, outlet, and status
Staff Create	/User-Role/create	Add a new user and assign a role
Attendance Log	/logs/attendance-log	Clock-in/out history per staff

New addition to Staff List: bulk select checkboxes + a **Bulk Activate / Bulk Deactivate** action.

3. Step-by-Step UI Flow

A single, simple flow: Org Admin logs in → creates a staff member → assigns a role → saves → and separately, can bulk activate/deactivate any number of existing staff at once.

Walkthrough in plain language

1. **Org Admin logs in.** The server returns the Org Admin role with the session — this decides what the sidebar shows.
2. **Open Staff List (/staff)** — a table: Name, Email, Phone, Role, Outlet, Status, Last Login.
3. **Create a staff member** — click the + button → fill in name, contact info, outlet → pick a **Role** from a dropdown (Org Admin, Internal Finance, Store Manager, or Sales Team) → **Save**. The new staff member appears in the list immediately.
4. **Edit an existing staff member** — row-level Edit icon reopens the same form pre-filled; a separate **Assign Role** action lets the Admin change just the role without touching anything else.
5. **Bulk Activate / Deactivate (new):**

- Tick the checkboxes next to any number of staff rows.
- A bulk action bar appears at the top of the table with two buttons: **Activate Selected** and **Deactivate Selected**.
- Clicking either shows a confirmation ("Deactivate 5 selected staff members?") before applying.
- On confirm, every selected row's status updates in one action — no need to open each staff member individually.

4. Role Visibility

Action	Org Admin	Internal Finance	Store Manager	Sales Team
View Staff List	✓	✗	✗	✗
Create/Edit Staff	✓	✗	✗	✗
Assign Roles	✓	✗	✗	✗
Bulk Activate/Deactivate Staff	✓	✗	✗	✗

5. What's Confirmed vs. What Needs the Client's Answer

Confirmed and working: role-based sidebar visibility, staff CRUD, role assignment, attendance logging, activity logs.

New — being added per this update: bulk activate/deactivate on the Staff List, restricted to Org Admin.
